

Dual Monitoring with a GPS Ankle Monitor and a Smartphone

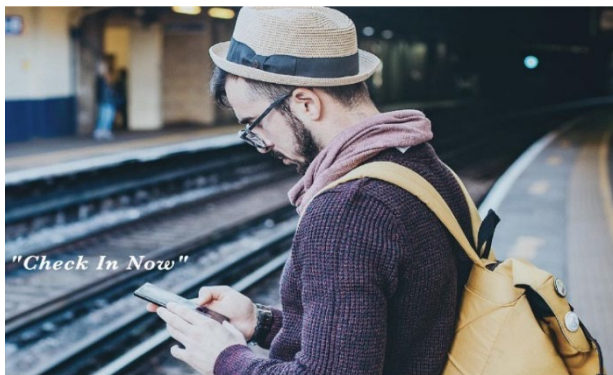

(One System Backs up the Other when used together, for the Most Secure Monitoring Ever)

"SOLUTIONS FOR COURTS, LAW ENFORCEMENT, PROBATION OFFICERS, AND REHAB CENTERS"

When a Smartphone Monitor can be Used on its Own or With an Ankle Monitor.

It's no longer possible to ignore GPS Smartphone Monitoring. Whether it's community supervision, adult / juvenile probation, pretrial bail release supervision, drug court, rehabilitation programs, a re-entry program, or a step-down from an ankle monitoring program, keeping tabs on any given caseload requires more than just knowing the client's GPS location. The benefit Smartphone monitoring provides is that it allows you to use the speed, intelligence, camera, calendar, cellular communication, motion sensor data, and other pre-existing features to gather more information about any given client. You can create an Inclusion Zone around their home so that when they leave the residence a 13 second video will show if they're with or without their surety. In addition, they can also conduct a self-initiated Vcheck to show who they're with...or you can send them an on-demand Vcheck request.

You can also set the monitoring center up to be the client's primary agent or backup agent, and they can be notified when the client completes a Vcheck.

 VCheck24

VCheck24 is a virtual supervision and monitoring technology built specifically to be used by Smartphones.

VCheck24 brings an intuitive, highly flexible, feature rich, yet user-friendly system into the hands of courts, community corrections, law enforcement and probation officers everywhere.

VCheck24 features client video check-ins, continuous GPS tracking, customizable check-in schedules, geo-zone creation, in-app agent/client messaging, as well as verifying the client is with their surety when outside of the residence. It can also give automatic daily and weekly activity/alarm reporting.

Plus SUPERCOM Ankle Monitor

Small, durable, easy to recharge, with the most advanced tamper detection systems available. Supercom monitors represent the latest, most advanced, reliable, GPS and RF ankle monitoring tracking devices ever created.

With its state-of-the-art GPS receiver Supercom provides unparalleled location accuracy via satellite, plus the ability to communicate over multiple cellular networks for reliable nationwide coverage.

Both Supercom GPS and RF Monitors have been designed to seamlessly integrate with Smartphone to monitor client's in-home confinement programs effectively and efficiently.
