VCheck24's Smartphone Supervision With Facial Recognition

SOBRsafe's Alcohol Monitors

TraTek Monitoring Services, known for electronic monitoring equipment that improves public safety, have now introduced new high-quality alcohol detection and user compliance monitoring equipment for various justice matters.

- With **VCheck24's** continuous GPS tracking, flexible geo-zone creation, zone triggered video check-ins, plus on-demand, scheduled, and/or recurring in-app messaging and polling, agencies can remain in constant contact with the enrollee and alert them about upcoming appointments, recurring treatment sessions, and even remind them regularly to take their prescribed medications. When an enrollee enters or leaves any pre-defined zone of interest such as home, work, the gym, or treatment facility, they're prompted to check-in. Multiple parties may receive a text and/or email alert when a particular zone is either entered or exited, and also when the enrollee completes the video check-in. In this way, **VCheck24** provides a steppingstone towards increased accountability. It provides the enrollee an opportunity to prove responsible decision-making.
- **VCheck24's** smartphone monitoring and supervision technology provides solutions to enable enrollee compliance with their customizable check-in schedules, geo-zone creation, in-app messaging, as well as automatic daily and/or weekly activity and alarm reporting.
- **VCheck24** can also be used in Step-Down ankle monitor programs. **VCheck24's** smartphone monitoring and supervision technology provides solutions to enable enrollee compliance with facial recognition, video check-ins, and continuous GPS tracking.
- **SOBRsafe** is next-generation alcohol detection technology today and it provides solutions for Family Court, DUI, and Bail/ Probation issues.
- **SOBRsafe** offers continuous alcohol monitoring via a sleek fitness styled wristband. The advanced transdermal technology automatically detects and reports the presence of alcohol emitted through the enrollee's skin within 8-10 seconds every 60 seconds, and no breath, blood, or urine samples are required. Just wear it and live life.
- **SOBRcheck** is a point of care alcohol monitor that also verifies a users identification by just the touch of a finger in approximately 8 to 10-seconds. Ideal for client check-in, medication stations, and staff safety.
- **SOBRcheck** is up to 4-times more efficient than a standard breathalyzer check-in process. In addition, the technology is much faster and more sanitary than breathalyzers as well.

With VCheck24, SOBRsafe, and TraTek You Get Quality Products and Great Service

For more in-depth information regarding VCheck24, and/or SOBRsafe, please feel free to contact us via email or at the numbers noted below.

**VCheck24 and SOBRsafe
products offer...**

- Easy, risk-free warranties.
- Affordability.
- Quick and easy setups.
- Quality customer service with years of industry experience.
